AutoCare — Car Service Booking System

Team Name: khedmati Team
Team Member: Nima khedmati
Project Type: Individual Project
Technologies: HTML, CSS, Python, Django, SQLite

Project Vision

AutoCare Booking is a web application that lets car owners browse the services of an auto service center, such as car wash, oil change, periodic service, and technical inspection, and request them online. Users can track the status of their requests from their own account, while the center's administrator reviews requests and updates their status. The project is built with Django, HTML, and CSS.

Target Audience

The primary target audience of AutoCare consists of car owners who want to access automotive maintenance services and submit service requests online.

The system is designed for the following user groups:

Car Owners: Individuals who want to explore available services, view service descriptions and approximate prices, and submit service requests at their preferred date and time.

Registered Customers: Users who want to manage their submitted requests and check their current status.

Service Center Administrators: Staff members who manage service information, review customer requests, and update request statuses through the administration panel.

AutoCare aims to provide a simple and user-friendly experience for customers while helping service center administrators organize service requests more efficiently.

Core Features

-As a car owner, I want to view the available car services so that I can choose the service I need.
-As a car owner, I want to view service descriptions and approximate prices so that I can make an informed decision.
-As a new customer, I want to create an account so that I can access the system's customer features.
-As a registered customer, I want to log in to my account so that I can submit and track my service requests.
-As a customer, I want to submit a service request with my contact and vehicle information so that the service center can review my request.
-As a customer, I want to specify my preferred date and time so that the service center knows when I would like to receive the service.
-As a registered customer, I want to view my submitted service requests so that I can keep track of them.
-As an administrator, I want to add, edit, and deactivate services so that the information displayed to customers remains up to date.
